If you're hoping to claim on insurance your veterinary surgeon will need to authorise this prior to surgery.

Non- Direct claims

Full payment + £5 set up fee

Direct Claim

Excess + any co-payments + £30 set up fee

No Insurance

Full Payment – estimate can be provided.

The following are included

- Pre-operative health check with a vet/nurse before the procedure
- Modern and safe general anaesthetics
- Tailored, effective pain relief combinations during and after the procedure
- Two post-operative checks (with nurse or vet). Please note any additional checks are chargeable.
- Buster collar (plastic Elizabethan collar)

Please look on the back at some additional extras we offer to support your pet before, during and after the procedure

Please review this checklist prior to the surgery day. This way, you can ensure that your pet is prepared and we have all the information required.

- ✓ **DO NOT feed after midnight** (except for pets under 6 months of age who can have 1 teaspoon of wet food between 6 and 7 am on the day of the procedure).
- ✓ **Ensure whoever is bringing in/ collecting your pet is named on your account**
- ✓ Please allow your pet plenty of time for bathroom duties before you arrive.
- ✓ Cats only: Keep indoors so they are around on the morning of the procedure.
- ✓ Please ensure they are as clean as possible (not muddy).
- ✓ If your pet is on any medication, nutritional supplements or specialised diets, please bring them with you. We will need to know the time when they last had their medication.
- ✓ Please let us know if there are any other procedures your pet requires while being admitted (for example: nail clips, anal glands, de-matt, ear clean)
- ✓ **Bring phone numbers** should we need to reach you at any time during the procedure and to organise a discharge appointment.
- ✓ Remember to schedule about 15 minutes for your pet's surgery admit in the morning and 15 minutes for the collection appointment in the evening.
- ✓ Expect a phone call around 1.00 to 3.30 pm with an update on how the procedure went and to confirm a discharge time.
- ✓ Discharge time is generally between 2.30 pm and 5 pm- if you have a particular time in mind then please mention this at the time of booking or admit appointment.
- ✓ De-stress medication: If you feel your pet might need a little something extra to help them to relax before they come for their procedure, please let us know and the vet can prescribe a calming tablet which can be given at home before they come in which costs between £8- 15 depending on size.
- ✓ If your pet is nervous and you prefer not to wait in reception please let the team know when booking and we will schedule your admit appointment at a time when we can get you straight in to a consult room or for you to wait in the car.
- ✓ **If you're hoping to claim on insurance your veterinary surgeon will need to authorise this prior to surgery.** Once confirmed don't forget to bring all the relevant paper work such as: policy schedule, claim forms, etc.

Pre-Anaesthetic blood testing

This tests give us information on your pet's internal organs, in particular the liver and kidneys. In the early stages of reduced organ function, your pet may not be showing any signs of illness, which is why this blood test is so important to pick up these problems, particularly in older animals. Identifying these problems enables us to greatly reduce the anaesthetic risk by giving supportive therapy before, during and after the procedure. We strongly advise that all pets coming in for a general anaesthetic be blood tested, but in particular those pets over the age of 7 years.

Cost £49

If your pet is on Complete Care only £30

Laser Therapy

This is a new therapy we provide to help your pet recover faster. The benefits include: pain relief, reduction in swelling, accelerated tissue repair, faster wound healing and reduction of scar tissue.

We offer this at discount price of £30 for two sessions (at time of procedure and 1st post-operative check).

Intravenous fluids (a drip)

We recommend Intravenous fluids while your pet is anaesthetised as it helps to maintain the blood pressure and therefore blood supply to the vital organs. Fluids also aid in the elimination of the anaesthetic agents which helps your pet recover from the anaesthetic quicker, feeling less groggy afterwards. Fluids are included with the anaesthetic pricing for all non-routine major surgery, however in order to provide comparable costs for neuterings, fluids are offered as an optional extra.

Cost £40

Additional Costs:

- Nail clip- £5.50 or £0 if your pet has our health plan Complete Care
- Ear Clean- £15 (this is a basic clean, not an ear flush)
- Anal glands- £12 or £0 if your pet is part of our health plan Complete Care
- Microchip- £15 , £10 (pets on Complete Care health plan)
- Inflatable collar/Medical pet-shirt/soft collar- £20
